

SRAVANI K

+1 (484) 983-9933 | sravanikotha06@gmail.com | Open to Relocate

SUMMARY

Full Stack Developer with 2+ years of experience building scalable web applications, microservices, and cloud-based solutions across banking and business domains. Skilled in Java, Python, Spring Boot, React.js, Angular, REST APIs, SQL, AWS, Docker, Kubernetes, and Kafka. Experienced in AI/GenAI, data-driven applications, CI/CD, testing, Agile development, and production support.

SKILLS

Languages: Java, Python, JavaScript, SQL, HTML5, CSS3

Frontend: Angular, React.js, NgRx, Redux, Bootstrap, SwiftUI

Backend: Spring Boot, Django, FastAPI, Hibernate, REST APIs, SOAP Web Services, Microservices

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Neo4j

Cloud & DevOps: AWS (EC2, ECS, EKS, S3, Lambda, API Gateway, DynamoDB, CloudWatch), Microsoft Azure, Docker, Kubernetes, Terraform

Messaging: Apache Kafka

AI / GenAI: LangChain, RAG, Vector Databases, OpenAI APIs, PyTorch

Data & BI: Tableau, Power BI, Excel

Testing: JUnit, Mockito, Postman

Monitoring: Prometheus, Grafana, ELK Stack, CloudWatch

Tools: Git, GitHub, Bitbucket, SourceTree, Jenkins, GitHub Actions, Xcode, Android Studio

Concepts: Agile/Scrum, SDLC, OOP, SOLID Principles, Design Patterns, Event-Driven Architecture

EDUCATION

Master of Science in Computer Science | Northwest Missouri State University, Maryville, MO

Jan 2024 - May 2025

PROFESSIONAL EXPERIENCE

Senior Analyst | DBS Bank | India

Jul 2022 - Dec 2023

- Implemented Spring Boot services supporting digital payments, account management, debit card services, and loan processing platforms handling high-volume transactions across retail banking applications.
- Refactored legacy monolithic banking applications into independently deployable microservices using design patterns and SOLID principles, reducing release coordination efforts by 60%.
- Integrated SOAP and REST-based web services with XML/JSON payloads for UPI payments, account linking, debit card services, and third-party banking systems.
- Automated build validation and deployment workflows using Jenkins, Docker, AWS services, Git-based workflows, and code reviews, reducing release preparation from four hours to under one hour.
- Enhanced Redis caching strategies, API gateway routing policies, and backend request processing flows, lowering customer application response times by 28%.
- Revamped Angular-based banking portals using lazy loading, modular architecture, and NgRx state management, reducing initial page load times by 35%.
- Containerized banking workloads using Docker and AWS ECS, improving deployment consistency and reducing environment provisioning time.
- Stabilized production banking services through distributed tracing, centralized logging, alerting, Prometheus, and ELK monitoring, reducing recurring support incidents by 30%.

INTERNSHIP

Jr. Full Stack Developer | Worksbot Pvt. Ltd. | India

Jan 2022 - Jun 2022

- Supported development of web-based business applications and dashboards for presenting operational data, reports, and business insights.
- Developed responsive frontend functionality using HTML5, CSS3, JavaScript, and Bootstrap, including forms, tables, filters, and responsive components.
- Assisted with Python/Django backend development, connecting frontend functionality with application logic, APIs, and database operations.
- Worked with application data to support tracking, reporting, dashboard views, and data validation.
- Collaborated with senior developers on debugging, testing, defect fixes, Git-based development, and application enhancements.

PROJECTS

EV Charger Locator Android App

- Developed an Android application to locate nearby EV charging stations using GPS, real-time location services, and Google Maps integration.
- Implemented secure login and location-based functionality to help users discover and navigate to available charging stations.

HealMind Bot - Generative AI Chatbot

- Developed an AI-powered conversational chatbot designed to provide interactive and personalized mental-health-support conversations.
- Built using Streamlit, PyTorch, Neo4j, and GPT technologies to provide an accessible conversational AI experience.

AI-Powered Cloud Monitoring & Log Intelligence Platform

- Developed an intelligent cloud monitoring platform using Python, FastAPI, AWS, Docker, and Kubernetes to analyze application health and infrastructure metrics.
- Built automated log analysis and anomaly detection workflows using Kafka, LangChain, vector embeddings, and Elasticsearch, reducing issue identification time by 35%.

Data Analytics Simulation - Deloitte

- Created interactive Tableau and Excel dashboards to transform structured datasets into meaningful infrastructure and business insights.
- Analyzed and visualized collected data to identify patterns, trends, and key information for data-driven decision-making.

iOS Application Development

- Developed multiple iOS applications using SwiftUI and Xcode with reusable components and user-friendly interfaces.
- Applied mobile development and UI/UX concepts to design, develop, test, and document application functionality.

Resource Deployment - Cloud Infrastructure

- Deployed and configured cloud resource groups and virtual machines to create scalable application and development environments.
- Applied cloud infrastructure concepts for resource provisioning, configuration, deployment, and environment management.

Policy Implementation - Cloud Security

- Implemented cloud security and governance policies to protect deployed resources from unauthorized access and configuration changes.
- Applied access-control and resource-management practices to improve cloud infrastructure security and operational consistency.

Cloud Is a Boon - Cloud Computing

- Deployed applications and infrastructure using AWS, Microsoft Azure, and Docker while exploring practical cloud-computing concepts.
- Worked with IaaS, PaaS, virtualization, and cloud infrastructure technologies for application deployment and resource management.

Aerospace Warehouse - Route Optimization

- Developed a geolocation-based solution to determine optimized travel paths for aerospace warehouse and logistics operations.
- Applied route and location information to minimize travel distance, operational effort, and transportation costs.

COVID-19 Awareness & Vaccination Web Application

- Developed a web application providing structured information about COVID-19 transmission, prevention, vaccination, and health resources.
- Built interactive navigation, Login/Register UI, contact and subscription forms, responsive content sections, and Google Maps integration.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate - Amazon Web Services, Aug 2026 - Aug 2029
- AWS Certified Developer - Amazon Web Services
- Professional Data Engineer - Google Cloud, Mar 2026
- Designing Microsoft Azure Infrastructure Solutions - Microsoft, Aug 2026
- Azure Cloud Computing - Verzeo, May 2021 - Jun 2021
- Full Stack Developer - Workspot, Jan 2022 - Mar 2022
- SQL (Advanced) - HackerRank, Aug 2024
- SQL (Intermediate) - HackerRank, Jul 2024
- SQL (Basic) - HackerRank, Jan 2024
- Data Analytics Job Simulation - Deloitte
- Tableau / Tableau Prep - Data Visualization & Analytics
- Power BI - Data Visualization & Business Intelligence
- Excel Dashboards & Stories - Data Analytics
- Bitbucket & SourceTree - Version Control / Development Tools
